## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1 – 58 are allowed.
2. The following is an examiner's statement of reasons for allowance: The prior art taken either singularly or in a combination fails to anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims 1, 13, 25, 35, 46, 53, and 55, for example which include a micromirror driver having an elastic body which supports the micromirror in rotation and at least one electrode which controls the rotation of micromirror by generating electrostatic forces through interaction between the micromirror and the electrode and an amplitude and a frequency of the rotation of the micromirror are controlled by varying one of magnitude and a waveform of the voltage (claims 1 and 35); a base electrode formed on the groove, at least two electrode which electrostatically interact with the base electrode to rotate the micromirror, and the two electrode operates independently (claim 13); a method of controlling micromirror device, the method comprising : generating electrostatic forces between the micromirror in response to voltage  $V$  to the at least one electrode and the voltage  $V$  satisfy an equation  $V^2 = V_0 + \alpha\theta$ , where  $V_0$  represents an initial voltage of the at least one electrode,  $\alpha$  represents an arbitrary coefficient and  $\theta$  represents a rotation angle of the micromirror

Art Unit: 2873

and controlling a frequency or in an amplitude of the micromirror by varying the initial voltage  $V_0$  of the at least one electrode and the arbitrary coefficient  $\alpha$  (claim 25) ; a micromirror having an outer edge and a rotation axis, the mirror comprising : a base electrode having a first portion formed along the outer edge of the mirror, and a second portion formed between the outer edge of the micromirror and the rotation axis, first and second driver electrodes which electrostatically interact with the first and second portions of the base electrode and the first voltage controls an amplitude of the micromirror and the second voltage controls a resonant frequency of the micromirror (claim 46 and claim 55), the micromirror having a base electrode , a first portion of the base electrode formed along an edge of the micromirror and a second portion of the base electrode formed between the first portion of the base electrode and the rotation axis and the first and the second electrode disposed near the first and the second portion of the base electrode and the method comprising : applying a voltage ( $V_1$ ) to the first driver electrode, satisfies an equation  $V_1^2 = V_0$  to control an amplitude of the micromirror, and applying a voltage ( $V_2$ ) to the second driver electrode where  $V_2$  satisfies an equation  $V_2^2 = \alpha\theta$  , and adjusting  $\alpha$  to control a frequency of the micromirror,  $V_0$  represents an initial voltage at the electrodes,  $\theta$  represents a rotation angle of the micromirror ( claim 53) ( Note : the claims 13, 25, 46, 53 and 55 , are allowed previous office action date was 10/08/2003).

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
